

Unused 7.5 MMSCFD Hydrogen Plant For Sale

This plant is designed to produce high purity, gaseous hydrogen and steam as follows:

Hydrogen

Flow (as pure H ₂) MMSCFD	7.5
Purity, mol % min	99.9
Impurities, ppmv max CO	10
Pressure, psig	250
Temperature, °F	100

A standard cubic foot (SCF) is the volume measured at 60°F and one atmosphere absolute.

Export Steam

Pressure, psig min	200
Temperature °F	Saturated steam at 330 psig will be let down to the above pressure.

The export steam will have a maximum solids level of 5 ppm and contain trace levels of methanol and ammonia.
